Module 4 | Lesson 4.8 – Modularizing Resolvers

1. GraphQL API type definitions and resolver functions can be modularized into separate files to help organize code.

A: True

B: False

Answer: A - True.

2. Which of the following best describes the `lodash.merge` function?

A: It creates an object that inherits from a prototype function with additional properties when provided.

B: It helps recursively merge enumerable properties of source objects into a single destination object.

C: It iterates over elements of a collection.

D: It transforms an object to a new accumulator object by iterating over each property and applying a function in each iteration.

Answer: B - It helps recursively merge enumerable properties of source objects into a single destination object.
