Module 1 | Lesson 1.4 - Automatic Reloading Using Nodemon

1. Why have we introduced the Nodemon utility tool to our Node application?

- A:** To help make our Node application run faster.
- B:** To log information in the console whenever changes have been made to our code.
- C:** To help run our JavaScript code.
- D:** To help restart our Node application whenever changes to our code have been made, which helps speed up development.

Answer: D - To help restart our Node application whenever changes to our code have been made, which helps speed up development.

2. The Nodemon utility package was installed as a development dependency since the Nodemon tool won't be needed when our application is to be in production.

- A:** True
- B:** False

Answer: A - True
