Quiz Questions

Module 7 | Lesson 7.4 – Custom useQuery Hook

1. What does our custom `useQuery` Hook do when used in a component?

A: It makes a GraphQL query when the component mounts and returns an object that contains the data from the query result.

B: It returns a function that when triggered makes a GraphQL query.

C: It behaves identically to having a `useEffect` Hook that is to have a clean-up function which is provided to the `useQuery` Hook.

D: It makes a GraphQL query when the component un-mounts.
