Quiz Questions | Answers

Module 1 | Lesson 1.7 – Compiling our TypeScript project

1. What does the `tsc` command in TypeScript do?

A: It helps run our Node/TypeScript project in conjunction with the `ts-node` utility tool.
B: It scaffolds TypeScript definitions from dynamically-typed JavaScript code.
C: It compiles TypeScript code to valid JavaScript.
D: It creates type annotations for code.

Answer: C - It compiles TypeScript code to valid JavaScript.
