Quiz Questions

Module 1 | Lesson 1.10 – Creating GET and POST Express routes

1. Which of the following best describes the `GET` and `POST` HTTP methods in a standard REST API.

A: The `GET` method is often used to request data from the server while the `POST` method can be used to send data to the server.

B: Both the `GET` and `POST` methods can be used interchangeably to get and post data between the client and the server.

C: The `GET` method is used to send data to the server while the `POST` method is often used to request data from the server.

D: The `GET` method is used to request data from the server while the `POST` method can only be used to delete a specified resource on the server.

2. The response object of an Express route contains information about the HTTP request being made. The request object of an Express route represents the response the Express server is to send.

A: True
B: False
