Quiz Questions | Answers

Module 1 | Lesson 1.3 – Creating a minimal Node:Express Server

1. What is the purpose of the `package.json` file in a Node application?

A: It is used to contain only the packages a Node application depends on.
B: Among other things; it provides metadata about a Node application, lists the packages an app depends on, and allows for the creating of scripts to run/build/test an application.
C: It is mainly used to help instantiate and use a third-party framework (like Express) to help spin-up a Node server.
D: It is primarily used to host developer documentation and notes.

Answer: B - Among other things; it provides metadata about a Node application, lists the packages an app depends on, and allows for the creating of scripts to run/build/test an application.

2. Which of the following best describes what the Express library is?

A: It is a Node library that has to be used to build Node applications.
B: It is a third-party library used to help introduce TypeScript into a Node application.
C: It is a third-party library designed to help build Node servers.
D: Both A & C.

Answer: C - It is a third-party library designed to help build Node servers.

3. Express gives us the capability to create routes (i.e. paths) that respond to different client requests.

A: True
B: False

Answer: A - True
