# Quiz Questions

## Module 4 | Lesson 4.8 – Modularizing Resolvers

**1. GraphQL API type definitions and resolver functions can be modularized into separate files to help organize code.**

**A**: True
**B**: False

**2. Which of the following best describes the `lodash.merge` function?**

**A**: It creates an object that inherits from a prototype function with additional properties when provided.
**B**: It helps recursively merge enumerable properties of source objects into a single destination object.
**C**: It iterates over elements of a collection.
**D**: It transforms an object to a new accumulator object by iterating over each property and applying a function in each iteration.
